### Manager Commentary

#### Market Overview

Global equity markets reversed the bearish trends of Q1 with the S&P 500, Russell 2000 Value, and the MSCI EAFE rallying 10.94%, 4.97%, and 11.78%, respectively. Globally, central banks began easing liquidity conditions, and the U.S. administration backed away from plans to dramatically cut federal spending. The reversal in policy stances, along with economic data confirming that the U.S. economy was not heading into a recession, set the stage for equity markets to recover in the second quarter. As we move through the second half of 2025, economic growth and inflation will stabilize, which will support markets if liquidity conditions continue to improve.

#### Portfolio Positioning

As a result of buys and sells and market action, the portfolio is overweight Communication Services, Industrials, Consumer Discretionary, Materials, Energy, and Financials while underweight Health Care, Consumer Staples, Information Technology, Utilities, and Real Estate.

#### Contributors to Performance

During the quarter, the portfolio experienced positive absolute and positive relative performance. Positive relative performance was driven by Communication Services, Information Technology, Real Estate, Utilities, Energy, and Consumer Staples. Detractors for the quarter were Industrials, Consumer Discretionary, Materials, Financials, and Health Care.

Similarly, accounts are removed from the composite after the last full quarter of management under the composite style. A list of all composites and pooled fund investment strategies offered by the firm, with a description of each strategy, is available upon request.
